

Annual Notice of the Availability of the Asbestos Management Plan for the Boquet Valley Central School District

Federal regulations require that schools be inspected for the presence of asbestos-containing materials. As part of compliance with these regulations, the buildings of the Boquet Valley Central School District were inspected in July of 1989. The results of that initial inspection, along with all subsequent inspections and updates, are documented in the District's Asbestos Management Plan.

If asbestos-containing material is present in a building, the management plan identifies the specific locations and amounts of material. The plan also includes results from material sampling, records of inspections conducted in preparation for building projects, and documentation of asbestos abatement.

The most recent AHERA-required triennial reinspection was completed in July 2025, and six-month surveillance will continue to be conducted on an ongoing basis.

The Asbestos Management Plan is available for public review during regular business hours at the District Office, located at the Mountain View Campus in Elizabethtown. Copies of the plan may also be requested for a minimal fee.

For additional details regarding the Asbestos Management Plan or specific abatement actions, please contact the Director of Facilities, Boquet Valley Central School District, 518-873-6371, ext. 2504.
